The accident frequency is the Lost Time Injury Frequency Rate (LTIFR), i.e. the number of reportable accidents per million hours worked. This is an internationally defined relative value which, for better comparability, represents the number of accidents as a reference of one million working hours. For this purpose, the lost time injury incidents at work that require notification under local law and result in at least a three-day absence from work, have been put in relation to the number of hours worked per million hours worked in the same period. Further information on the number and rate of work-related injuries with serious consequences and number of various types of work-related injuries etc. are not reported due to the data situation. Information on the most important types of work-related injuries, work-related hazards and measures can be found in the annual report.

 GRI 302-1

Energy consumption by type in MWh 2019–2022

	2019	2020	2021	2022
Group total	389,277	323,329	295,345	385,499
Electricity consumption ¹	270,080	226,885	200,846	275,534
Transport energy ²	63,791	47,732	45,043	58,885
Natural gas consumption ³	49,623	42,145	41,429	38,420
District heating ⁴	4,280	4,714	4,943	8,760
Heating oil ⁵	1,364	1,406	2,648	3,149
Self-generated energy ⁶	140	446	436	751
Sold energy ⁷	80	80	130	163

¹ Electricity consumption is the electricity taken directly from the energy service provider.

² Transport energy consists of diesel and petrol consumption by the company's vehicle fleets.

³ Natural gas is the natural gas taken directly from the energy service provider and used, for example, for heating, air conditioning, or lighting.

⁴ District heating is the heat taken directly from the energy service provider.

⁵ Heating oil is the fuel used for energy creation.

⁶ Self-generated energy includes energy generated by solar panels this year (photovoltaics).

⁷ Sold energy is the energy that has not been used, but was sold to company external users.

GRI 302-1

Energy consumption in MWh absolute and relative 2019–2022

Energy consumption includes electricity, natural gas, transport fuels such as diesel and petrol, heating oil and self-generated energy (photovoltaic). Sold energy has been deducted from this value.

Other Countries, sold and rented machines	71,326	57,688	55,620	46,069

Apart from CO₂e, no other greenhouse gases were recorded, as CO₂e was identified as the most important emission factor according to the materiality analysis.

There are no biogenic emissions from the combustion or biodegradation of biomass.

 GRI 305-1, -2, -3

Tons CO₂e-emissions by source 2019–2022

	2019	2020	2021	2022
Group total	171,105	137,192	125,739	146,588
Direct emissions Scope-1 in tCO ₂ e	28,693	22,572	21,908	24,776
Indirect emissions Scope-2 in tCO ₂ e	85,431	68,287	55,564	81,582
Indirect emissions Scope-3 in tCO ₂ e	56,981	46,333	48,267	40,230

Apart from CO₂e, no other greenhouse gases were recorded, as CO₂e was identified as the most important emission factor according to the materiality analysis.

There are no biogenic emissions from the combustion or biodegradation of biomass.

Scope 1: These are emissions from the combustion of fuels and natural gas.

Scope 2: These are emissions from energy generation. Emission values come directly from the energy suppliers (market-based). With certified green electricity, the CO₂e emissions are 0.

Scope 3: Emissions were recorded on the one hand using direct data on the flights and on the other extrapolated based on the number of devices rented or sold outside of the Group.

Source of conversion factors: German Environment Agency or DEFRA, data as of 2022.

Ⓞ GRI 305-1, -2, -3

Tons CO₂e Emissions absolute and relative 2019–2022

The total emissions include the Scope-3-CO₂e emissions of the rented or sold machines, but these are not included in the per capita emissions.

Examples of hazardous waste are: batteries, spray cans, paints, oils, etc.

 GRI 306-2

Waste in tons absolute and relative 2019–2022

This document contains detailed environmental, social and governance data, which supplement the information in the non-financial (consolidated) report 2022 of the NOVOMATIC AG Group.

Unless otherwise stated, all companies within the scope of consolidation, with information recorded via direct data collection or extrapolation are covered. For the fiscal year 2022, this report includes data collected directly on companies making up 95.5 % of the NOVOMATIC AG Group revenue. The remaining amount is extrapolated to reach a total of 100 %.

All information and data refer to the 2022 fiscal year from January 1 to December 31. Figures are taken from the cut-off date of December 31.

Other countries: All other companies in the scope of consolidation that are missing from this list have been extrapolated. See scope of consolidation of the NOVOMATIC AG Group in the management report. Companies from the USA are included in "Other Countries".

Due to the standardization of the definition in the group, only active employees are counted without parental leave. The information per head includes full-time employee equivalents for employees and workers not including absences (e.g. parental leave, long-term sick leave).

tCO₂e: Equivalent CO₂ emissions in tons.

Water from the public water mains is included under water consumption.

Waste is only recorded for the Gaming Technology companies.
